

INSTALLATION OF DRIVERS FOR THE JA-80T (PC-60B) INTERFACE IN WINDOWS VISTA

First of all it is necessary to prepare the whole installation:

- Download the drivers from the attached CD/DVD or from the internet onto the hard drive in your PC or into a special folder. The downloaded file must be unpacked first – it was packed by WinRar software – extract it into the same folder
- Then you can connect the JA-80T interface to the requested (the best solution is a free one) USB port on the computer
- The new-hardware installation wizard is then triggered

Windows Vista

We are going to use the 64bit driver version

Find and install a suitable driver for the device (recommended)

I have no CD/DVD. What can I do ? -> Next

Search for drivers on the PC hard drive (extended)

Browse ...

Find the **Jablosi.inf** file , the exact path to the file. Click on : **jablotron_seriál_interface_2k_2k3_xp_vista** and confirm, click OK and Next

Installation is triggered , confirm you are sure about installing drivers

Installation finished and successful -> Close or Finish

After successful installation, a bubble will appear with the text : hardware is ready to use.

- Check the drivers

My PC – Options – Hardware – Device Manager

In the “COM and LPT” menu you should see “JABLOTRON serial interface device” and in the USB bus.
