does a perfect electronic security system means do you operate household appliances from anywhere and have it under control?

**OASIS** is a professional electronic security system that adjusts exactly to the requirements of your house or apartment. You have an overview of everything that is happening in your household or company via your mobile phone or Internet. You already have the essential part of the security system – your mobile phone. Events from the guarded area can be also reported to a security services agency that in the case of burglary or possible fire emergency ensures immediate professional intervention on the spot. Your possessions are consequently taken care of despite that fact that you are on holiday or have your phone switched off.

## The OASiS security system features:

- its installation is very considerate to the interior
- it enables you to add up to 50 wireless devices (detectors, controls, sirens)
- wireless devices are powered by lithium batteries with a lifetime of 3 years as a minimum
- enables you to connect up to 30 hard-wired zones
- for communication, the GSM/GPRS, LAN/TEL or telephone communicators can be selected
- in the case of alarm, it notifies a security services agency and informs you via your mobile phone
- can be operated by up to 50 authorised users
- all keypads of the system have a built-in contactless RFID card reader ensuring easy control of the system (up to 50 cards or codes)
- is able to inform you who came to or left the house, and when, e.g. children coming back from school
- OASiS can be remotely operated via a mobile phone or from the Internet
- the motion detector can take a photo of the burglar photos are sent to a secure server where they are available via your mobile phone or by Internet
- you will be notified about fire alarms in time thanks to sensitive smoke detectors
- have you forgotten to close a window or door? OASiS will let you know on leaving the house
- security components can also be used for home automation. If you already have them, why don't you use them?
- motion detectors can, when someone's passing through, automatically switch the light on and trigger ventilators
- the window detector does not only guard the general outdoor area of a building, but when airing a room, it can also switch the heating system off and save money on heating
- on being switched on, the secure system may switch some devices off automatically as well. Thus you don't have to worry that you have left a device on after leaving the house.

## **OPENING WINDOW/DOOR** DETECTION

The JA-81M magnetic detector eacts to window or door opening t provides another wired input ter ninal to the system, has input termihals for other magnets or additional ensors. It is an inseparable part of the general outdoor protection of a building

## MOBILE PHONE NOTIFICATION

OASiS reports selected events by SMS to your mobile. In the case of an alarm, you are immediately notified by SMS on what kind of alarm it is and what it was caused by, e.g. "HOME ALARM REPORTS: FIRE ALARM CHILDREN'S ROOM". If you are connected to a security services agency, dispatching will make sure help is sent immediately.

## **OPERATION BY MOBILE PHONE AND INTERNET**

Operating the security system by mobile phone or Internet is easy via the built-in GSM or LAN communicator. Consequently you can remotely switch on or off not only the alarm system, but other technologies and devices in the house too, such as heating and irrigation systems, lights, etc. You can send a command from your mobile phone by SMS – e.g. "SWITCH HEATING ON" or call the communicator directly and input a numeric password.

## MOTION DETECTION WITH PHOTOGRAPHING AN OFFENDER

The JA-84P motion detector with a camera and flash guards interior space and reports movement o people within its visual field to the control panel. It takes black and white still photos of the guarded area and sends them to a secure server and makes them available to vou via vour mobile phone.

## MOTION DETECTION

The JA-80P motion detector guards interior space and reports move ment of people within its visual field to the control panel. You are notified about the movement via you mobile phone. It can be installed in one cover with a detector quarding window glass-breaking (JA-80PB)

GAS LEAK

nobile phone

The JA-80G detector reports the

presence of combustible gas and

by means of the alarm relay it clo-

ses the supply valve. A gas leak is

signalled by a siren and by a fire

alarm on the control panel. You are

informed about the gas leak via your

## FIRE DETECTION

You receive a fire warning via your nobile phone.

## WINDOW-OPENING DETECTION

This JA-82M "invisible" magnetic detector is mounted directly inside the plastic or wooden window frames and it is therefore totally discreet. It reliably reports tampering with a window

## **GLASS-BREAK DETECTION**

Breaking glass in a window or doo is detected by glass-break detec tors. They form, together with the window/door opening detectors the basic outdoor protection o the guarded building. They can be installed independently (JA-85B) or combined with the JA-80PB motion

## INTERIOR SIGNALLING

The efficient JA-80L interior siren is powered by a mains socket outlet and besides alarms, it signals entrance and exit delays. If unplugged from the mains, it signals tampering. It functions as a wireless bell, or signals people passing through and door opening.

OUTDOOR SIGNALLING

The JA-80A outdoor wireless sirer acoustically signals outdoor intrusion and works as an advanced tamper detector. The siren is wireless, which greatly eases installation. It is powered only by a lithium battery.

The JA-80F LCD system keypad wire lessly operates and programmes the system and signals its status. It has a built-in RFID card reader to operate the system and an input terminal be edited.

## SYSTEM OPERATION

to connect an additional detector Texts displayed on the keypad car

**CONTROL PANEL** 

The central unit of the system is the OASiS control panel with 50 addresses for wireless devices, up to 30 wired inputs and two programmable outputs. The components can be assigned to three sections. It is possible to set up to 50 user codes and cards. The GSM/GPRS, LAN/TEL or telephone communicators reporting events from the system to the owner and to the security services agency can be connected to the control panel.

RC-86 remote controls may be used

to operate the system easily. They

easily and comfortably secure and

release the system by only pressing

SYSTEM OPERATION

BY A KEY FOB

CALLING FOR HELP

on a neck strap.

Wireless emergency buttons are

used to call for help. You can wear

the RC-87 waterproof button lite-

rally on your hand all the time as

a wrist watch, or around your neck

## WIRELESS OPERATION

The RC-88 remote control enable you to operate various appliances in the house through AC-82 or UC-82 receivers. It can be used e.g. to oper garage doors, to substitute a light

OASis

is a clever security system securing your house against da-

mage caused by burglars, fire, gas leaks, floods, etc. It offers many opportunities to comfortably operate various devices and appliances in the house locally as well as remotely via a mobile phone or by Internet. It's your guardian and helper.

The JA-80S reacts to the presence of visible combustion products and temperature increases in a room caused by fire. It reports fire alarms to the control panel wirelessly and has a built-in local warning siren

## GARAGE DOOR OPERATION

Doors and parking gates can be operated by hand-held or wall mounted remote controls or ideally by the RC-85 control, suitable for assembly in cars as well. This remote control can be activated e.g. by flashing the full-beam headlight A door detector detects any tam pering with garage doors.

### The TP-8x wireless thermostat control individual heating circuits

wirelessly (through AC receivers). You receive SMS reports of critically low or high temperatures on your mobile phone. The heating system can be operated remotely via mobile phone or can be blocked automatially while you air rooms.
