

The PS-03 OASiS 80 alarm presentation kit

The Jablotron PS-03 Oasis presentation kit: The best way of training installers is their active involvement in a real installation. This can be easily done, even in a meeting room, using the PS-03 presentation kit. There are two sets of samples.

- ✓ The first one is a working system (all devices are marked with green labels). It is based on the JA-82K GSM control panel which can be easily attached to the presentation board. The presentation board has a built in enlarged display, so that all displayed information is very visible to everybody, even in a large meeting room. All devices (detectors, remote controls, sirens etc.) are equipped with velcro, so their installation is very easy. A presenter can easily demonstrate all the features of the products, their programming and configuration.
- ✓ The second set of samples (marked with red labels) is for hand-to-hand evaluation by course participants. They can handle real products and they also become an active part of the presentation when the wireless keypad or remote control provided to them is enrolled to the demonstrated control panel.

The PS-03 presentation kit comes with all the necessary accessories (power adapters, batteries, telescopic stand, screwdrivers) and transportation covers.

- ✓ **The PS-03 presentation set will make your presentation professional and convincing and it can significantly help your sales growth.**
- ✓ **Special conditions for acquiring the PS-03 presentation kit can be negotiated with Jablotron's Export Department.**

Working samples on the presentation board.

The PS-03 kit ready for transport.

Training in progress.

Working samples:

JK-82 kit
 JA-80A, E, H, PB, Q, S, T, 82M, 84P,
